SUBJECT: Discontinuation of Therapeutic Sodium Iodide I 131 Capsules and Solution

Dear Customer,

Our records indicate that you have purchased Curium's Therapeutic Sodium Iodide I 131 Capsules and/or Solution products within the past 18 months. Curium has carefully considered many factors including customer demand, production cost, raw material cost, sourcing challenges and strategic fit. Our review has resulted in the decision to discontinue manufacturing both product lines.

Curium has been off the market for Sodium Iodide Capsules and Solution since early November 2017. This outage was due to raw material constraints from our supplier in South Africa. We will not be selling any I 131 Therapy products moving forward. Effective July 1, 2018, Sodium Iodide I 131 Capsules and Solution products will be officially discontinued from the Curium North America product portfolio.

These discontinuations apply to the following product codes.

Product Code	Product Description
N450 ¹	Sodium Iodide I 131 Solution
N452 ¹	Sodium Iodide I 131 Capsules

¹All product code suffixes related to Sodium Iodide I 131 Capsules or Solution are included.

At Curium we pride ourselves on being able to supply products that are best-in-class and second to none. While in this instance we are removing a product from our North American portfolio, we are committed to the development and launch of more products in the years to come.

Please contact Customer Service at 888-744-1414 or your Curium Sales Representative with any questions.

Sincerely,

David M. Koerber
Senior Product Manager-North America
