

August 30, 2016

Dear Customer,

Mallinckrodt Nuclear Medicine will be temporarily suspending the production of Sodium Iodide I 131 Therapeutic Capsules and Solution. The last production lot, prior to the temporary suspension, will be available for sale starting on Friday, November 4, 2016.

This temporary disruption coincides with the exit of the National Research Universal (NRU) reactor from the isotope production landscape.

Until recently we had assurances from our supply partners that the NRU shutdown would not negatively impact their ability to supply us with I 131 raw material. We are working diligently to validate another I 131 supplier and will provide you an update once we are ready to communicate a back-to-market date.

We understand the impact of this temporary shortage and appreciate your continued support. For additional information, please contact your local Mallinckrodt Nuclear Medicine sales representative at 800.634.1515 or our Customer Service department at 888.744.1414.

Best Regards,

David M Koerber  
Senior Marketing Product Manager, North America
