GE Healthcare
Life Sciences Core Imaging and InVitro Diagnostics Sourcing

Good afternoon.

During the first week of April, we went out of stock on Pharmalucence Pyrophosphate (Kit for the Preparation of Technetium Tc99m Pyrophosphate Injection). In pursuit of our effort to continually improve product quality, the company decided to upgrade the product with a new and improved vial stopper. This new stopper must undergo significant testing and validation activities prior to our submission of a PAS (Prior Approval Supplement) to FDA. Upon approval by FDA, we expect to return to the market sometime later this year. Our apologies for this inconvenience.

Thank you for your continued support of Pharmalucence.

Regards,

A handwritten signature in black ink, appearing to read "John J. Felock". The signature is fluid and cursive, with the first letters of the first and last names being capitalized and prominent.
